

Mechanical Lifter

- No pumping required.
- No hydraulic pump repair required.
- No oil leaks.
- No seals to replace.

MX0308

The mechanical lifter can be used to replace a hydraulic pallet truck when the load weight is under 300kg. The lifter itself is light, weighing only 25kg, making it easy to carry and transport to other work spaces or vehicles. As the unit is foldable the lifter is also easy to store. It can even be hung on a hook on the wall to save space.
